            android:text="Chinh sửa" />
        <Button
            android:id="@+id/btn_xoa"
            style="@style/ButtonStyle"
            android:onClick="XoaKhachHang"
            android:text="Xóa" />
    </LinearLayout>
</LinearLayout>
```

2. thiết kế Layout hiển thị nội dung 1 phần tử (1 dòng) trong danh sách tùy biến

```
hKhachHang.java
                 activity_danh_sach_khach_hang.xml
                                                   danhsach_khachhang_list.xml ×
    <?xml version="1.0" encoding="utf-8"?>
    <pinearLayout</pre>
        xmlns:android="http://schemas.android.com/apk/res/android"
        android:id="@+id/layout_dskh"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:orientation="horizontal" >
        <TextView
            android:id="@+id/txt_stt"
            style="@style/TextStyle"
            android:layout_width="0dp"
            android:layout_weight=".7"
            android:gravity="center"
            android:textIsSelectable="false" />
        <TextView
            android:id="@+id/txt_hoten"
            style="@style/TextStyle"
            android:layout_width="0dp"
            android:layout_weight="3"
            android:layout_marginLeft="16dp"
            android:textIsSelectable="false" />
        <ImageView
            android:id="@+id/img_thanhtoan"
            android:layout_width="0dp"
            android:layout_height="20sp"
            android:layout_weight="1.6"
            android:contentDescription="Hình thức thanh toán"
            android:gravity="center" />
```

3. tạo lớp KhachHangArrayAdapter làm Adapter hỗ trợ hiển thị danh sách tùy biến (Adapter mặc định chỉ hiển thị 1 nội dung)

```
ng.xml
         danhsach_khachhang_list.xml
                                      © KhachHangAdapter.java
                                                               ○ KhachHangArrayAdapter.java ×
      package com.example.ql_sudungnuoc.xuly;
                                                                                       ∆5 火2 ^
      import ...
       3 usages
       public class KhachHangArrayAdapter extends ArrayAdapter<KhachHang> {
          2 usages
          Activity context;
          2 usages
          int layoutId;
          4 usages
          ArrayList<KhachHang> khArray;
          public KhachHangArrayAdapter(Activity context, int layoutId,
                                         ArrayList<KhachHang> khArray) {
               super(context, layoutId, khArray);
               this.context = context;
               this.khArray = khArray;
              this.layoutId = layoutId;
          }
          public void setKhArray(ArrayList<KhachHang> khArray) {
               this.khArray = khArray;
               notifyDataSetChanged();
          }
          @Override
 61
          public int getCount() { return khArray.size(); }
 ©1
          public View getView(int position, View convertView,
```

```
ViewGroup parent) {
        LayoutInflater inflater = context.getLayoutInflater();
        convertView = inflater.inflate(layoutId, root: null);
        if(getCount()>0 && position>=0) {
            final KhachHang kh = khArray.get(position);
            final TextView txtSTT =
                    convertView.findViewById(R.id.txt_stt);
            txtSTT.setText(""+ (position + 1));
            final TextView txtHoTen =
                    convertView.findViewById(R.id.txt_hoten);
            txtHoTen.setText(kh.getHoten());
            final ImageView imgThanhToan =
                    convertView.findViewById(R.id.img_thanhtoan);
            if(kh.getThanhtoan().equals("Chuyển khoản"))
                imgThanhToan.setImageResource(R.mipmap.mastercard);
            else
                imgThanhToan.setImageResource(R.mipmap.money);
        return convertView;
    }
}
```

4. điều chỉnh mã lệnh Java cho DanhSachKhachHang cho phép hiển thị danh sách tùy biến và thực hiện các thao tác cơ bản trên CSDL.

```
